Description

I have some trouble with mylaps decoder, the ZRound doesn't accept all lap times. I have the problem with resend=2/12 error. What does it mean? I have no error with AMBrc protocol just with P3.

Rejected reason: No feedback/additional data

2020-03-08 - Transponder detection are only enabled when the clock is running (practice or race)

If you start practice time, then when a transponder is detected (be registered or not) it is detected and showed into the list. If there isn't any racer with that transponder registered. The "Unnasigned TX" name will be given as racer name. If you "double click" on it the registration form will be popped up to fill in the details.

If you refers to the small "detection" icon on the racer's form. It only works while clock is running as well. It's function is to associate the next transponder passing to the opened form.

2020-04-09 - No feedback received after +1 month
